

2017-2021 X3/Turbo R & 2020 Turbo RR Dynamite 2.0 325 & 350 Turbo Kit

SKU(s): 2017-2019 325 (600FC0031), 350 (600FC0035), 2020 Turbo R/RR 325 (600FC0032), 350 (600FC0036)

INCLUDED PARTS DM-325

(1) DM-325 2.0 Turbocharger Assembly
(1) X3 Dynamite Install Kit
(1) Maptuner or CodeShooter Dynamite Flash
(1) EVP Charge Tube Kit
(1) X3 1000cc Injectors, Set of 3 (2020 Only- Injector Adaptors)
(1) EVP Blow Off Valve 2.0 Kit
(1) High Pressure Fuel Pump Kit
(1) X3 Spark Plugs, Set of 3
(1) Turbo Water Coolant Kit
(1) Dynamite V-Flow Intake
(1) X3 Head Stud Kit, 9mm
(1) X3 Race Intercooler
(1) X3 Plenum Reinforcement Brace

REQUIRED TOOLS

Torque Wrench
Anti-Seize/ Penetrating Lube
Flat Head Screwdriver
Metric Socket Set
Metric Open End Wrench Set
Pinch Clamp Tool
Motor Oil
Engine Coolant
Torx Sockets

INSTALLATION INSTRUCTIONS

INCLUDED PARTS DM-350

(1) DM-350 2.0 Turbocharger Assembly
(1) X3 Dynamite Install Kit
(1) Maptuner or CodeShooter Dynamite Flash
(1) EVP Charge Tube Kit
(1) X3 1300cc Injectors, Set of 3 (2020 Only- Injector Adaptors)
(1) EVP Blow Off Valve 2.0 Kit
(1) High Pressure Fuel Pump Kit
(1) X3 Spark Plugs, Set of 3
(1) Turbo Water Coolant Kit
(1) Dynamite V-Flow Intake
(1) X3 Head Stud Kit, 9mm
(1) X3 Race Intercooler
(1) X3 Plenum Reinforcement Brace

REQUIRED TOOLS

Torque Wrench
Anti-Seize/ Penetrating Lube
Flat Head Screwdriver
Metric Socket Set
Metric Open End Wrench Set
Pinch Clamp Tool
Motor Oil
Engine Coolant
Torx Sockets

INSTALLATION INSTRUCTIONS

Parts list for DM-325 and DM-350 Install Kit:

1	Dynomite Turbo Oil Feed Line
12"	5/8" Fire sleeve for Oil Hose
1	X3 Turbo Heat Shield
1	27mm Pinch Clamp – Oil Drain Hose
1	20 AMP Fuse
2	Bosch 4 BAR MAP Sensor
1	MAP Sensor Adaptor Harness
1	AEM 340LPH Fuel Pump Upgrade
1	Fuel Pump Adaptor Harness with Relay
6	18mm Pinch Clamps for Water Hoses
1	M8X1.25X40mm Stud
1	M8X1.25 Copper Flange Nut
24"	3/8" Silicone Water Hose
2	3/16" 90 Degree Hose Barb
9"	3/8" Silicone Water Hose
6"	3/4" Fire sleeve for Water Hose
18"	3/4" Fire sleeve for Water Hose
7"	3mm ID Vacuum Hose
7"	3mm ID Vacuum Hose
2	Brass Splicer 3/8" Hose ID Barb – 3/8" Hose ID
1	5/16" Corrugated Fuel Line 13.8"
2	13.3mm Pinch Clamp
6	11.3mm Pinch Clamp

Can Am X3 Dymomite 2.0

Fitment	HP
2017-2021 Turbo R	172
2018-2022 Turbo	120
2020 Turbo RR	195

This is a high-performance upgrade!!!! Although we have gone through great lengths to build safety into the upgrade turbo kit, the fact is installing any performance upgrade and/or turbo system requires care in both operation and installation. Poor fuel, improper setup or any number of things that are done incorrectly can damage your engine!

- You have likely voided the sound and exhaust emission standards of your country if applicable
- This upgrade is intended for OFFROAD and RACING use only
- This is a performance upgrade which may shorten the life of your engine, especially if installed incorrectly or operated without regard to your instruments
- The fuel requirements must be adhered to!!!! Poor fuel can destroy an engine in seconds!!!
- Evolution Powersports bears no responsibility for damage caused to your vehicle by the installation of EVP products. The warranty on big turbo kits is 30 days from the date of purchase. Evolution Powersports, at its discretion will determine whether a part meets the warranty requirements. In no case is there any warranty from EVP for your vehicle or vehicles drivetrain. Although we have been careful to supply you with the highest quality parts possible, we assume no liability for damage to vehicle or personal injury from installing or using any of our products.
- The installation of this kit is technical and mechanical in nature with many opportunities to make mistakes – mistakes that can be very costly! If you are not qualified to install this kit, don't do it!! Bring it to one of our qualified installation centers to do the installation.
- This kit will make your vehicle faster, climb higher and accelerate more quickly and take a longer distance to brake than a stock tuned vehicle. If you are not capable of controlling the vehicle with the added performance, do not install the kit.
- High boost is hard on spark plugs – they must be changed frequently. If you experience misfire issues – Gap and replace the spark plugs!
- A full exhaust and clutching are required for this kit and can be purchased separately

TURBO REMOVAL

- Step 1:** Remove panel between the seats that allows access to the turbocharger.
- Step 2:** Remove and label pressure lines from the boost control solenoid going to the wastegate actuator, intake, and air box.
- Step 3:** Remove the worm drive clamp holding the intake tube onto the turbo.
- Step 4:** Remove the worm drive clamp on the top of the air box.
- Step 5:** Using a 13mm socket remove the 2 bolts behind the driver seat holding the air box to the firewall.
- Step 6:** Remove the worm drive clamps or t-bolt clamps holding the charge tubes to the intercooler.
- Step 7:** Using a 10mm socket, remove the fasteners (4) holding the intercooler in place. Be sure to unplug the intercooler fan. Remove intercooler assembly from vehicle.
- Step 8:** Remove the nut on the V-band clamp holding the exhaust onto the turbo.
- Step 9:** Remove the worm drive clamps holding the heat shielding on to the mid-pipe. Remove heat shields from mid-pipe.
- Step 10:** Remove oil drain line from turbocharger by cutting the OEM clamp.
- Step 11:** Remove the charge tube from the turbo outlet.
- Step 12:** Remove oil supply line from top of the turbocharger.
- Step 13:** Remove the nut securing the water line to the bottom of the exhaust manifold.
- Step 14:** Using soft grip vise grips or hose clamps pinch off the soft coolant lines that supply and return water to the turbo.
- Step 15:** Remove the OEM clamps holding the soft coolant line to the hard line on top and bottom. Using a side cutter, cut clamps securing soft water lines to the hard lines.
- Step 16:** Remove socket head cap screw securing hard water lines to turbocharger and remove the hard line.
- Step 17:** Remove bolts securing exhaust manifold heat shields – lower heat shield can be removed. Upper heat shield must stay on until the turbo is loose.
- Step 18:** Using a 10mm socket or T40 Torx remove the fasteners holding the exhaust manifold to the engine and remove the turbo from the vehicle.
- Step 19:** Remove oil pressure sensor and OEM oil line (be sure to save the copper washers)

EVP Turbo Install Installation

Step 1: Slide supplied fire sleeve over the supplied oil hose. sensor Reinstall oil pressure through the banjo side of the EVP oil supply hose. Re-use copper washers (install a copper washer on both sides of the banjo fitting).

Step 2: Install the provided stud into the top hole of the center exhaust port, thread stud in and back it out one full turn (See Fig. 1)

Figure 1

Step 3: Reinstall the OEM exhaust gasket and install new turbo charger, reusing OEM fasteners.

Step 4: Torque (2) of the retaining screws to 44 in-lb (about 4 ft-lb), following the order shown in Figure 2.

Figure 2

INSTALLATION INSTRUCTIONS

Step 5: Torque retaining screws to 17 ft-lb, following the order shown in Figure 3. On the final torque sequence take a 4mm Allen wrench and hold stud while tightening copper nut with 10mm wrench as close to 17 ft-lb as you can. (make sure you have at least 2 threads protruding from nut)

Figure 3

Step 6: Connect the oil line to the fitting on the top of the turbo and tighten.

Step 7: Use a 27mm pinch clamp to secure the oil line onto the turbo charger.

Step 8: Using the provided 24" coolant line with fire sleeve connect the supplied line to the lower coolant line on the passenger side. Use 18mm pinch clamps to secure. Be sure to route the coolant line between the oil drain and motor.

Step 9: Connect coolant lines to the turbo as shown in Figure 4.

Figure 4

Step 10: Using the supplied 9" coolant line with fire sleeve, connect line to the existing coolant line on the turbo. Connect line to the turbo as shown in Figure 5. Secure all connections with 18mm pinch clamps.

Figure 5

Step 11: Install the new upper charge tube onto the turbo.

Step 12: Reinstall the intercooler and connect the charge tubes and intercooler fan.

Step 13: Connect the new V-flow to the air box and reinstall the air box to the firewall.
Tighten the clamps on the v-flow. (See V-flow instructions for further detail)

Step 14: Connect the 3 lines from the boost control solenoid to their corresponding locations.

Step 15: Reinstall exhaust - be sure to install the EVP supplied heat shield for the turbo exhaust housing. Additional heat shielding may be required. It is up to the customer and/or installer to determine what additional shielding may be required.

2018-2020 MAVERICK X3 AEM High Flow Fuel Pump

Fuel Pump For 325 and 350 Kits

NOTE: it is best to syphon all fuel out of the tank prior to starting this job

NOTE: THE FUEL PUMP RELAY HARNESS MUST BE INSTALLED PRIOR TO POWERING UP THE DASH OR STARTING THE VEHICLE – FAILURE TO ADHERE TO THIS WILL DAMAGE YOUR ECU.

Step 1: Remove plastics covering fuel tank. See picture below for location

Step 2: Unplug electrical connector going into the top of the pump.

Step 3: Unhook fuel hose by removing the red clip from the connection. Then push down on the fitting while pushing in on the back side of the fitting – then lift the fitting off the pump assembly.

Step 4: Rotate pump assembly cap counterclockwise and remove. Remove assembly. (see the pictures on the next few pages for clarification)

NOTE: Your fuel pump assembly must be the 172 HP Turbo R or 195 HP RR versions. If you have a 2017 X3 or a 120 Base Model that has not been updated to the Turbo R or RR pump assembly, this must be purchased separately!

Step 5: With the fuel pump on a workbench and all the fuel drained out of the pump assembly, press in on the tabs to release the housing covering the tank.

- Install fuel pump assembly back into tank in the reverse order from its removal.

Step 9: Install the EVP supplied fuel pump into the plastic housing that was removed in step 5 on the previous page. Make sure the pump is oriented and fitted correctly into the bottom of the housing - when properly oriented, the pump will drop into place and it will not rotate.

Step 10: Plug the electric connection into the pump.

Step 11: Carefully align the tabs and reinsert the cap into the housing – do not force it – if it does not fit in with moderate pressure, something is not correct – recheck. See picture below of fuel line and electrical connection.

Step 12: Reinstall pump assembly.

Step 13: INSTALL EVP PLUG N PLAY FUEL PUMP RELAY HARNESS

Step 14: Connect the yellow wire with the ring terminal and the relay to one of the bolts that secure the fuel pump protector strap to the frame. Make sure the ring terminal is grounded to the frame.

Step 15: Replace OEM fuel pump fuse with the supplied 20 amp in location F5.

Map Sensor Replacement

Step 1: Replace the 2 OEM map sensors with the EVP supplied sensors: One sensor is located on the plastic intake manifold plenum. The second sensor is located on the throttle body.

Step 2: For the throttle body map sensor use the supplied adaptor harness to make the electrical connection.

NOTE: It is possible to install the map sensor adapter harness to the OEM plug rotated 180-degrees. If you are getting MAP sensor codes or the vehicle is not running correctly, please check this.

Step 3: Tighten the 2 OEM clamps that secure the throttle body – this **WILL** pop off if not tightened.

Clutching

NOTE: Clutching for 325-350 kits must be adjusted for an **8400-8600 RPM** shift out. THIS IS VERY IMPORTANT!

NOTE: Running a 91-octane tune clutching must be adjusted to **8100 RPM** shift out.

Launch Control (optional)

NOTE: If Launch Control has been purchased as part of this kit, your engagement RPMs **MUST** be raised to at least 2600 RPMs but preferably 3000 RPMs. The reason is big turbos require more energy to spool and it takes more RPMs to generate enough heat. Although Launch Control will work at 2600 RPM, it cannot build more than a few lbs of boost at 2600. At 3000 RPMs, 7-8 lbs of boost at sea level and modest air temperatures is possible.

INSTALLATION INSTRUCTIONS

Thank you for choosing Evolution Powersports products. If you require further assistance, please call our Tech Support @ (715) 247-3862

Note: This product is exempt from the emission standards and related requirements of 40 C.F.R. § 1051 as provided by 40 C.F.R. § 1051.620, and California law [e.g., vehicle code §§ 27156 and 38391]. This product is sold only for use in connection with EPA certified, purpose-built, nonroad vehicles used solely for closed course, nonroad competition/racing and not used for any recreational purpose or on public highways or right of ways maintained by and open to the public. This product is sold only in connection with machines that do not fall under state and/or federal noise or emission standards/regulations. Purchasers who/that purchase this product represent and warrant that the product is purchased only in connection with EPA -certified, emission-regulations-exempt and noise-regulations-exempt competition/racing vehicles as interpreted under applicable state and/or federal law. Questions: Call Evolution Powersports at (715) 247-3862.
