Gluing Blanks to Tubes:

Rough the entire surface of the tube using 180 grit paper. Next, using either a thick CA or 5 Minute Epoxy, apply adhesive to both the tube and the inside of the blank. To secure the brass tube into the inside of the blank make sure to rotate the tube as you insert it into the blank. This will help ensure even coverage of the adhesive and a much more secure bond.

Squaring the Blank to Length:

When squaring the blanks to length ensure to only go to the brass. Removing brass will affect the overall length of the blank which is critical to the proper operation of the pen.
