

HomeCHEF 4-in-1

CLEANING GUIDELINES

The **Home Chef 4-in-1 Oven** has so many functions, we expect it to be used every day, several times a day. To keep your oven looking and working its best, follow our simple cleaning guidelines.

What you'll need:

Double-sided sponge (for heavy grease and stains, use the rough side)

Lemon juice—bottled or fresh-squeezed

Baking soda

Dishwashing liquid

Tap water

Clean cloth

End-of-Day Wipe Down

Repeat: Daily

Time needed: <5 minutes

Tools and materials: Double-sided sponge, dishwashing liquid, tap water

Combine warm water and a drop of dishwashing liquid to make a warm, sudsy solution. At the end of the day, wipe down the interior of the oven with the soft side of the sponge. If the day's cooking leaves grease or other stains, run the **Steam Cleaning Function** (below).

Steam Cleaning Function

Repeat: Weekly, or more often as needed

Tools and materials: Lemon juice, double-sided sponge, microwave-safe bowl that holds 2 cups (500 mL) or more, tap water

Time needed, including prep: 25 minutes

1. Mix 1¼ cups tap water with 1 tbsp lemon juice and place in the microwave-safe bowl.
2. Ensure the oven is in clock mode and turn the dial to select **Auto Mode 21, Steam Clean**. Press the dial to confirm the program.
3. Press dial again to start. The time will appear in the display window and begin to count down. The program runs for 20 minutes.
4. Five beeps sound at the completion of the program. Open oven door and wipe the cavity and door area with the soft side of your sponge.

If further cleaning is required:

Convection Function

Repeat: As needed, after Steam Cleaning Function

Tools and materials: Double-sided sponge, baking soda, dishwashing liquid, water, clean cloth

Time needed, including prep: 25-35 minutes

1. Remove accessories from the oven and set the convection oven to 425°F (220°C).
2. Run for 20-30 minutes.
3. (If needed) Combine ¾ cup warm water and 3 tbsp baking soda to make a solution. Use the rough side of the sponge, soaked in the mixture, to break down and remove grease.
4. Alternate Step 3 with cleaning with a sudsy solution (see **End-of-Day Wipe Down** above)
5. Wipe off remaining soap and water with a clean, damp cloth.
