

High-speed for your home

High-speed internet in just a few steps.

Together we can

Welcome to Vodafone

Install your cable router now. It's very easy with these instructions.
Do you prefer to install with video or digital step-by-step instructions? You will find these here:

vodafone.de/installieren

Have fun with GigaNetz by Vodafone.

Time needed for installation

Installing your cable router

15 minutes

Updates and activation can additionally take **up to 10 minutes**

Connecting devices with Wi-Fi or LAN

5-20 minutes, depending on the number of devices

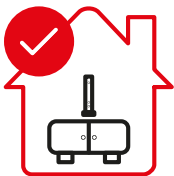

Connecting your telephone optional

5 minutes

Activation can additionally take **up to 10 minutes**

How to position your cable router

Position your cable router vertically. A central, elevated location is best. Objects or furniture positioned in front of your cable router will reduce Wi-Fi range.

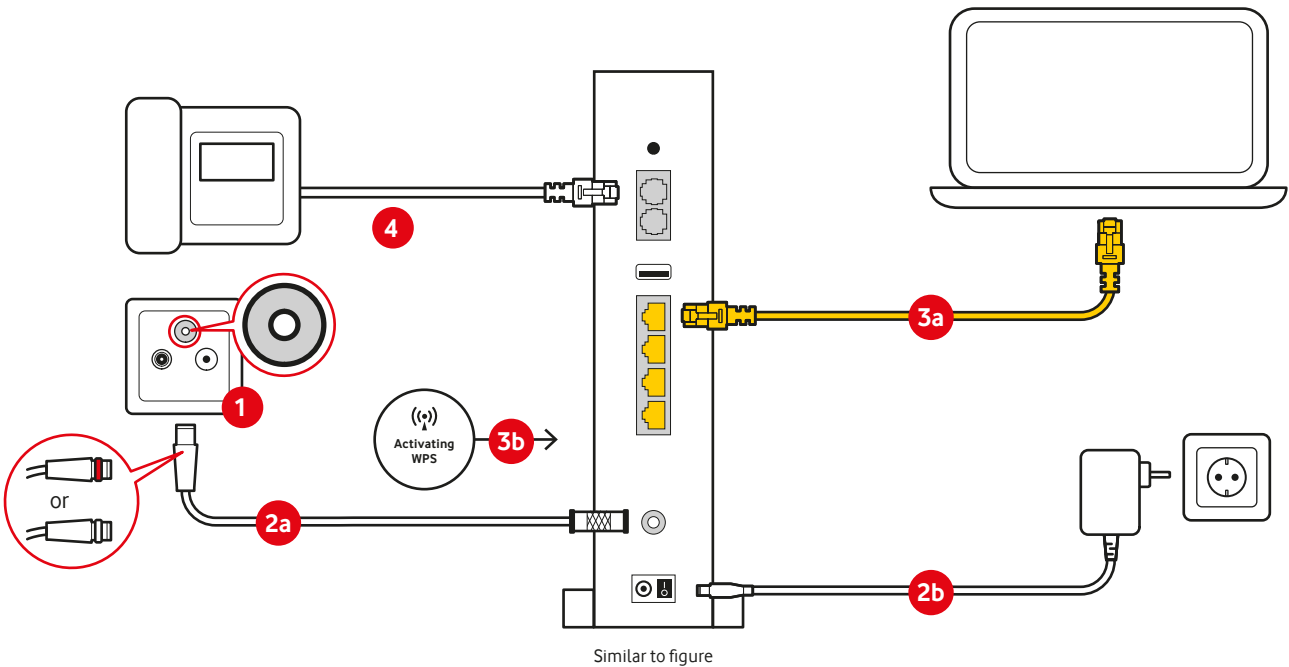

How to avoid sources of interference

Do not place your cable router near a baby monitor or large metal objects such as a fridge or flat-screen TV.

How to install your cable router

1 What does your cable socket looks like?

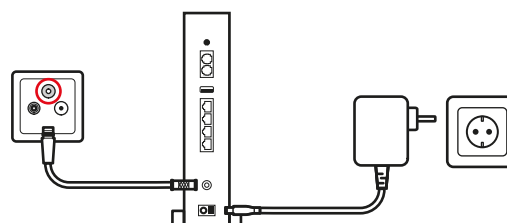

Your cable socket has 4 or 3 connections (figure A) or 2 connections (figure B). If the socket has 2 connections, screw or plug the multimedia socket adapter on it.

2 Connecting your cable router

2a Plug the connecting cable on the DATA port of your cable socket or of the multimedia socket adapter and the other end into your cable router.

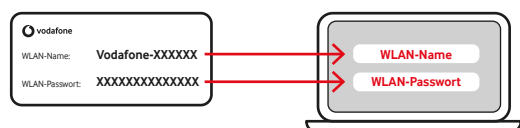

2b Plug the power cable into your cable router and the power adapter into the electric socket. If your cable router has a rocker switch, put it on I. Wait until the Power and the Internet LEDs light up continuously. This can take up to 15 minutes. Please continue only after that.

3 Connecting devices

Manually via Wi-Fi

You will find pre-set access data on your cable router: WLAN-Name (SSID) and WLAN-Passwort. Open the menu for Wi-Fi settings on the device that you wish to connect. Select your network (SSID) and enter the WLAN-Passwort.

3a Via LAN

First, check whether LAN is activated on your device. Connect your computer with your cable router via network cable.

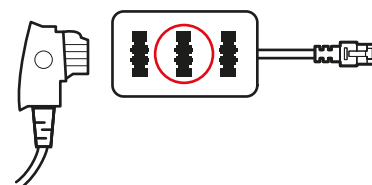

3b Via Wi-Fi through WPS

First, check whether your device supports WPS. Hold down the WPS button on your cable router until the WPS LED flashes. Then, activate WPS within 2 minutes on the device you wish to connect with your cable router.

4 Connecting your telephone (optional)

You can connect your telephone directly to your cable router. Please use the port TEL 1 for this. It can take up to 10 minutes for your telephone to be activated.

If your telephone's connector does not fit, please use the RJ11-TAE adapter.

To change settings on your cable router, enter **http://192.168.0.1** in your internet browser. You will find the Kennwort on your cable router and on the supplied card.

Kabel-Router kurulması

1 Kablo prizinin neye benziyor?

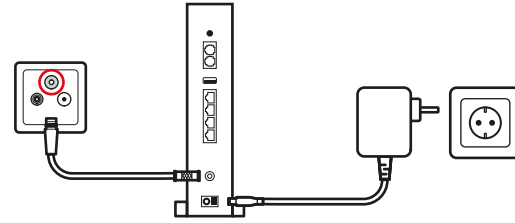

Sahip olduğun kablo prizi 4 veya 3 bağlantıya (şekil A) ya da 2 bağlantıya (şekil B) sahiptir. 2 bağlantılı prize sahipsen multimedia priz adaptörünü ilgili yere tak.

2 Kabel-Router bağlanması

2a Bağlantı kablosunu kablo prize veya multimedia priz adaptörünün DATA bağlantısına ve diğer ucunu Kabel-Router tak.

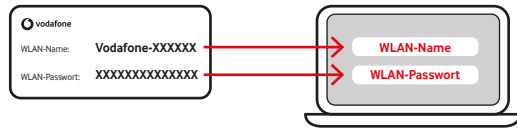

2b Elektrik fişini Kabel-Router ve güç kaynağı ünitesini prize tak. Kabel-Router bir geçiş anahtarı varsa, bunu I olarak ayar. Power ve Internet LED'leri sürekli yanana kadar bekle. Bu işlem 15 dakika kadar sürebilir. Sadece bu süreden sonra devam et.

3 Cihazların bağlantı kurması

WLAN üzerinden manuel olarak

Kabel-Router önceden ayarlanmış erişim verilerini bulacaksınız: WLAN-Name (SSID) ve WLAN-Passwort den bağlanmak istediğin cihazdaki WLAN-Einstellungen menüsünü aç. Netzwerk (SSID) seç ve Passwort gir.

3a LAN üzerinden

Önce cihazında LAN'ın etkin olduğunu kontrol et. Bilgisayarını, ağ kablosu vasıtasıyla Kabel-Router bağla.

3b

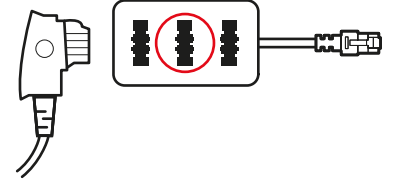

WLAN üzerinden WPS kanalıyla

Lütfen önce cihazın WPS'yi destekleyip desteklemediğini kontrol et. WPS LED'i yanıp sönene kadar Kabel-Router deki WPS düğmesine basın. Ardından 2 dakika içinde Kabel-Router bağlamak istediğin cihazda WPS'yi etkinleştir.

4 Telefon bağlantısı, opsiyonel

Telefonunu doğrudan Kabel-Router bağlayabilirsin. Lütfen TEL 1'i kullan.Telefonunu etkinleştirilmesi 10 dakika kadar sürebilir.

Telefonunun fişi uymuyor mu? O zaman RJ11-TAE adaptörünü kullan.

Kabel-Router ayarları değiştirmek için kullandığın internet tarayıcına şu adresi gir: <http://192.168.0.1> Kennwort Kabel-Router altında ve verilen kartta bulabilirsin.
