

21x28.5cm

Electrolized Water Sanitiser

Product Functions:

1. Uses water and salt to make a toxic-free and environmentally conscious disinfectant that doesn't leave chemical residue
2. kills up 99.99% of bacteria
3. Works on a range of surfaces to disinfect and remove stains

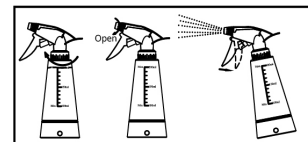

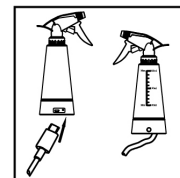

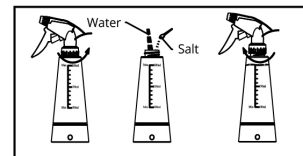

Instructions:

Please read all the warnings and instructions carefully before use

1. Twist off the nozzle and fill the spray bottle with 200ML of water and 6 to 10g of salt

Note: Always ensure your hands are dry before handling USB cable

2. Replace the nozzle but do not tighten
3. Connect the USB cable, then press and hold the power button until the LED light activates, starting the electrolysis process. The LED Light will turn off after approx. 3 to 5 minutes, once the process is complete
4. Once finished, immediately disconnect the power supply. Tighten the spray nozzle and your disinfectant is ready to use

Warnings:

1. Once finished, please ensure power cable is disconnected. Never leave the product plugged in for any extended period of time
2. Always ensure your hands are dry before handling the bottle or power cable
3. The bottle should be emptied regularly and allowed to dry before being put into storage. The solution should not be left in the bottle for an extended period of time
4. Disinfectant can have a bleaching effect, avoid coloured and dark materials and always test a small, inconspicuous section of the material first
5. Not suitable for use on silk or leather
6. The solution should never be inhaled, consumed or used directly on foods
