Cling-On™ Ficus Benjamina Samantha- Weeping Fig

Plant Care Information

- For optimal performance, keep at 60-85°F (15-29°C).
- Protect furniture when watering.
- Feed once per month at half strength when plant is actively growing.
- This plant loves warm temperatures above 60 degrees, so be sure not to place it near a door or vent that will let in cold air. Average room temperature is just right. If you are comfortable, then your weeping fig will be too.
- Allow the top inch or so of the soil to dry out before watering again.
- Add some perlite and/or orchid bark to an all-purpose potting mix for a great growing medium.
- Younger plants will grow fairly quickly and may need to be repotted every 1-2 years. \
