

7 MULTI-COLOR CHOPPING MATS

Includes Bamboo Cutting / Storage Board

Model# BMB17024

Bamboo is one of the worlds fastest, renewable plants with a maturity cycle of only 3-4 years, making it an environmentally friendly natural resource compared to forested hardwoods.

To care for your Bamboo Cutting/Storage Board:

Clean the surface of your board after use with a hot, soapy sponge. As with any wood product, do not submerge in water or put your board in the dishwasher as this may loosen the glued joints, cause it to break or warp.

You can periodically condition your board by lightly rubbing it with mineral oil, applied with a clean cloth. Mineral oil is odorless and tasteless, so do not substitute olive or vegetable oils.

Store serving boards away from heat as heat can dry out bamboo.

MATS

Polypropylene mats meet all USA FDA standards for food safety.

To care for Chopping Mats:

Always wash mats with warm soapy water after every use or clean in the Dishwasher. Always dry the mats before storing in the Bamboo Storage Board.
