Welcome

With the help of Kondo Audio Note Japan's pure silver conductors, the DITA Celeste brings you a refreshed take on the silver cable, as you've never heard it before — unprecedented levels of speed and clarity, with the body to match.

Possibly the first time Kondo's silver conductors have been implemented in portable audio, the addition of DITA's new Awesome plug V2 makes this groundbreaking cable the full package.

The Celeste's white outer weave serves as a deliberate design choice referring to the clarity and purity of Celeste's sound, a call to users to treat this upgrade cable and its delicate silver conductors with care.

Important safety instructions

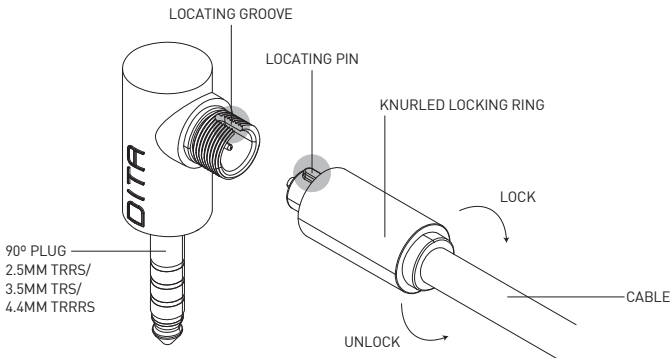

1. Always practice safe listening habits.
2. Ensure that the output volume of your device is set to a minimum before inserting earphones into your ears.
3. Listening at high volumes for extended periods of time can permanently damage your hearing.
4. Never insert the earphones into your ears without the supplied tips.
5. Take extreme care when inserting and removing your earphones.
6. Always keep your earphones dry. These earphones are not designed for wet use.
7. Do not wear your earphones in any environment where you need to have an auditory sense of your surroundings (e.g. on the streets, or while driving).
8. Do not plug your earphones into anything other than the output jack of your media player.
9. Do not insert any sharp objects into the nozzle of your earphones. You may permanently damage the highly sensitive diaphragm of the driver.
10. If you develop any skin or medical conditions, cease the use of this product immediately and consult your doctor. DITA is not responsible for any medical conditions/symptoms that may develop or arise due to the use of this product. Use at your own risk.

APV2—Awesome Plug V.2

Introduced on the original DITA Dream in 2016, the Awesome Plug was revolutionary, spurring numerous manufacturers to create their own versions. Developed to future proof your cables so that you can adapt them for use with different playback devices for a more versatile rig.

APV2 is the newest version of the Awesome Plug — it has been updated to accommodate a wider variety of enthusiast level cables reflecting the developments in high-end earphone cable developments.

To change a connector type

1. Grasp the body of the plug firmly with one hand and pinch the knurled knob with the other.
2. With the plug facing you, firmly twist the knurled ring counter-clockwise to unscrew it.
3. The knurled ring should fall into position once it has been completely unscrewed.
4. Pull out the plug.

To insert a different type of plug

1. Gently position the plug to the body while aligning the locating pins.
2. Move the knurled ring into position. While gently pushing the knurled ring against the screw threads, turn the ring counter-clockwise until you feel a slight snap. This positions the threads correctly.
3. Holding it in the above position, turn the knurled ring clockwise to tighten it.
4. Do not use a tool such as pliers to loosen or to tighten the knurled ring. It is designed for finger pressure only.

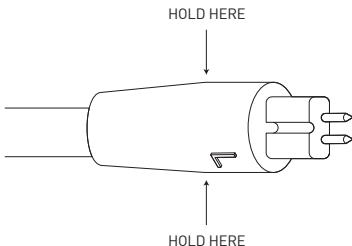

Using the APV2

1. Great care has been taken to ensure the durability and longevity of the APV2 under normal usage conditions.
2. By design and by its nature, the 3.5mm TRS plug is not for professional use. As such, do not subject the plug to any undue pressure. E.g. items resting on the plug while they are in your bag.
3. In some instances, different types of connectors will be supplied with APV2 equipped cables. These are the 4.4mm TRRRS, 3.5mm TRS and 2.5mm TRRS connectors. Ensure that you are using the correct one for your media playback device. If you are unsure, check with your dealer before proceeding further.
4. Always remove the plug from an appropriate receptacle by grasping the connector body. DO NOT tug on the cables.
5. Careful usage of the cables can prolong the lifespan of your product.

How to insert 2-pin plugs

The DITA Celeste cable features a moulded ear hook which incorporates a memory cable. This allows the user to shape the cable to a shape most suited for their ears and earphones.

1. Ensure that you have the correct polarity before inserting the 2-pin plug.
2. If you are unsure of the polarity, check with your earphone manufacturer.
3. Check the Left and Right markings on the cables to ensure that you are inserting them into the correct earphone.
4. Grasp the 2-pin plug body closest to the pins without actually holding onto the pins.

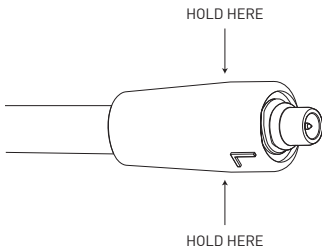

How to insert 2-pin plugs (con't)

5. Gently align the pins to the female jack on your earphone.
6. Push very, very gently to ensure that the pin sizes are compatible.
7. Do not use force when plugging in the cables to your earphones. This could result in damage to your cable or earphone.
8. Always remove the plug from an appropriate receptacle by grasping the connector body. DO NOT tug on the cables.
9. Due to the huge variety of earphones adopting 2-pin type connectors makes it impossible for us to test them all. It is the user's responsibility to ensure compatibility before using them with the Celeste replacement cables.

How To insert MMCX plugs

The DITA Celeste cable features a moulded ear hook which incorporates a memory cable. This allows the user to shape the cable to a shape most suited for their ears and earphones.

1. The Center signal contact pin is Positive and the Outer Contact is Negative.
2. Ensure that you have the correct polarity before inserting the plug into a receptacle.
3. Check the Left and Right markings on the cables to ensure that you are inserting them into the correct earphone.
4. Grasp the MMCX plug body closest to the connector without actually holding onto the pins.

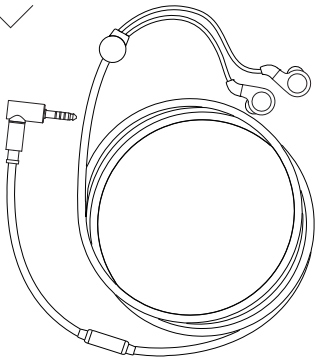

How to insert MMCX plugs (con't)

5. Gently align the contact points to the female jack on your earphone.
6. Push very, very gently to ensure that the connector sizes are compatible.
7. Do not use force when plugging in the cables to your earphones. This could result in permanent damage to your cable or earphone.
8. Always remove the plug from an appropriate receptacle by grasping the connector body. DO NOT tug on the cables.
9. Due to the huge variety of earphones adopting 2-pin type connectors makes it impossible for us to test them all. It is the user's responsibility to ensure compatibility before using them with the Celeste replacement cables.

Precautions for use

- Do not wind the cable tightly.
- Do not subject the cable to any tight bends for extended periods of time.
- Do not subject your cables or earphones to harsh chemicals, solvents or acids.

Warranty and Disclaimer

- There are countless types of earphones on the market and we cannot ensure that earphones equipped with similar connector types will perform correctly when using our cables.
- There are no clear standards that manufacturers can adopt when using these connectors. As such, the Celeste replacement cable may not always be compatible with your earphones.
- The best way to ensure that your earphone is compatible is to check with your dealer.
- In your package are both a commonly used 3.5mm TRS plug as well as a 2.5mm TRRS and a 4.4mm TRRRS plug. Please be sure that you are using the correct plug for your media playback device before proceeding with playback.
- We are not responsible for any damage caused to your earphone or media playback device arising from mis-use or incompatibility.
- In most cases, your cable is warranted from manufacturer's defect for 6 months. Such defects do not include wear and tear. Contact your local distributor for more information.
- If you experience a problem with your cable, please contact your country representative. Should you wish to contact us directly, you may do so at: info@DitaAudio.com.
