

LARGE BASKET QUICK START

How to correctly install your large basket

MAX Weight Capacity: 75lbs

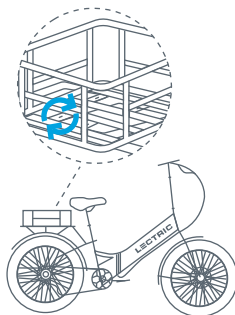

STEP 1

Place the large basket above the rear rack and align the screw holes to the insertion points of the rear rack. The basket may be placed perpendicular or parallel to the rear rack, depending on personal preference.

STEP 2

Line up all screw holes and insert screws/washers. Begin finger tightening each screw/washer until all are snug in place. Use a 4mm allen wrench to tighten the screws/washers, connecting the rear basket to the rear rack.

STEP 3

Baskets are interchangeable with front and rear racks. If mounting the large basket to the front rack, it can only be mounted in the perpendicular position.
