

Instant Children Print Camera

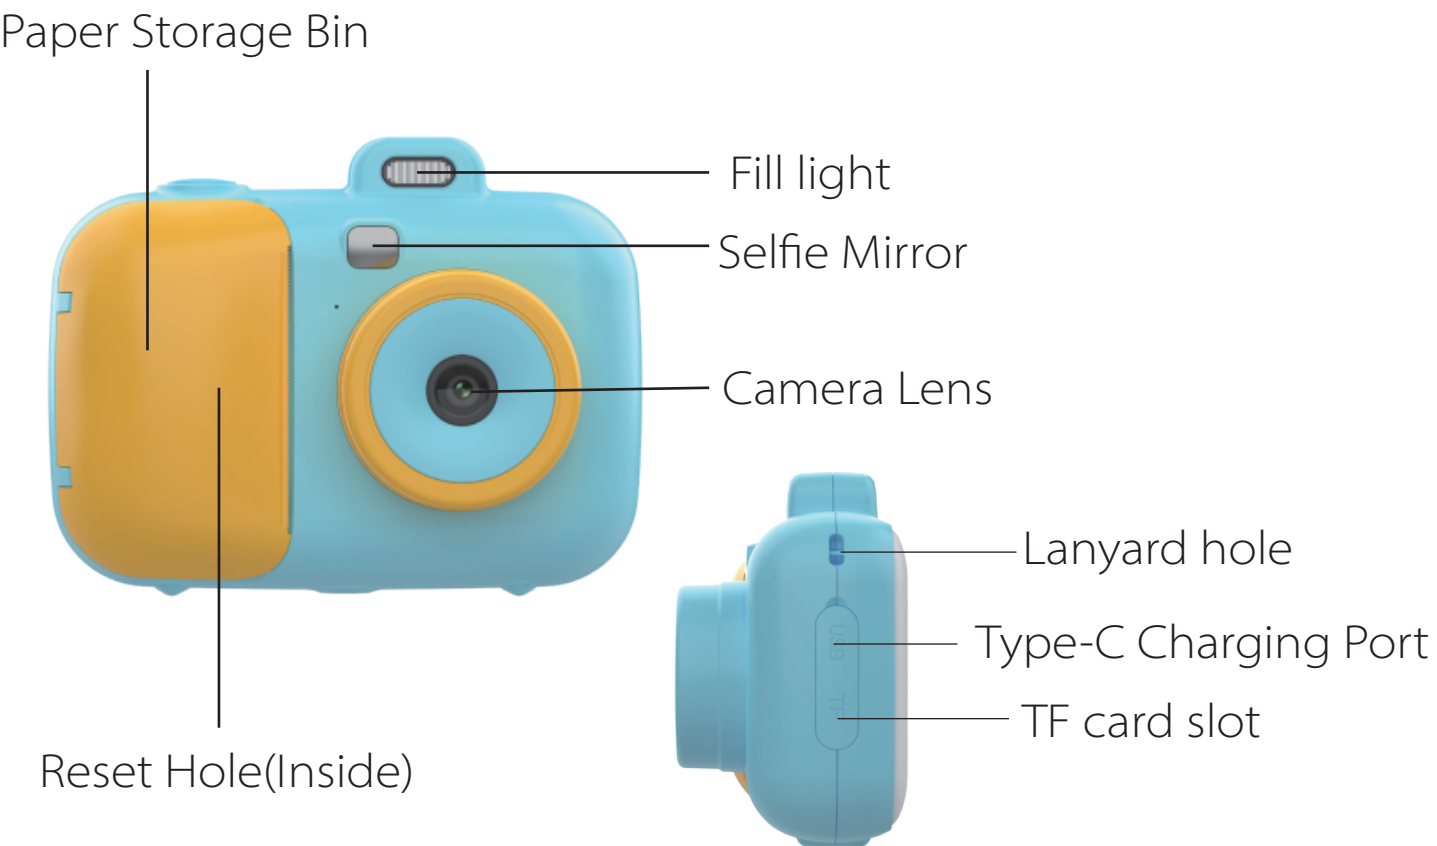

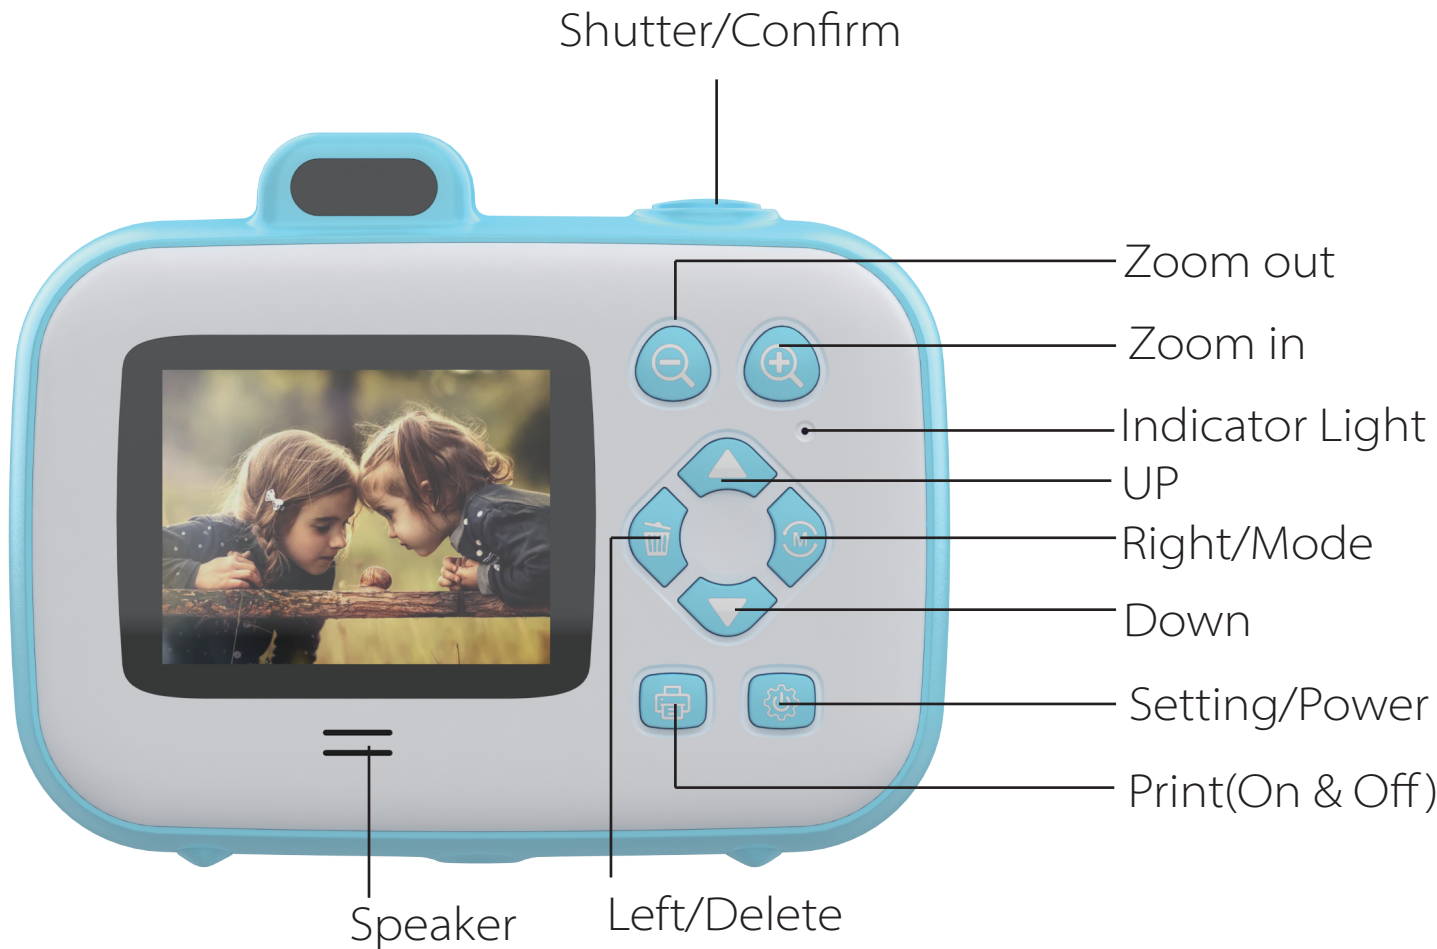

USER MANUAL

RoHS FC CE 

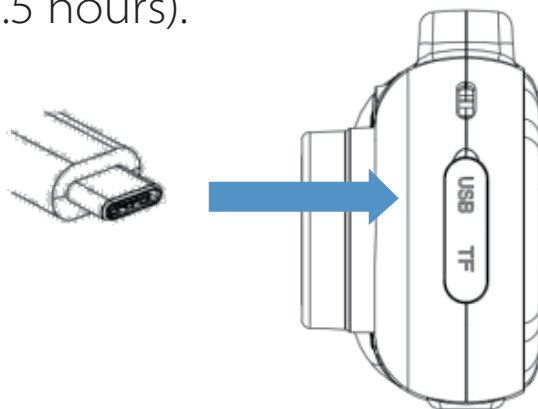

Description

Before Use

1. Charging

Before the first time use, please fully charge the camera before use. The indicator light is red while charging and it goes off when the camera is fully charged(About 3.5 hours).

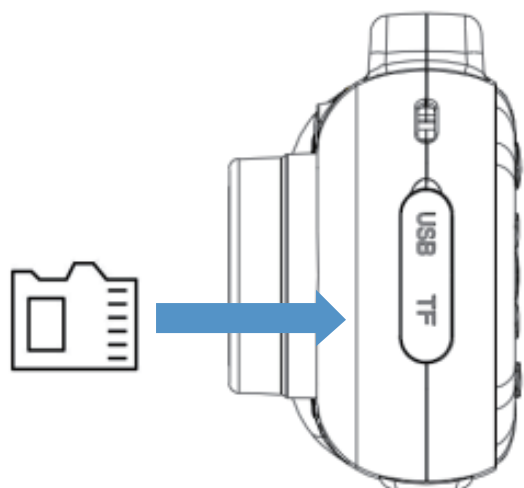

2. TF card installation

Push the card into the TF card slot and you will hear a "click" sound when it is correctly installed and the TF card will stay in the slot.

Notice:

When inserting the card, the side with metal bars should be in the same direction as the screen. If it does not stay in the slot, please push it deeper until you hear the "click" sound. The TF card icon on the screen change as well.

Correctly installed

No Card

3. Print Paper Installation

- Open the cover of the paper storage bin
- Load the paper with the smooth side facing down
- Leave part of the paper outside of the storage bin and close the cover

Notice:

- Wrong direction of installing the paper will not print photos.
- Do not block the print page when printing in case it gets jammed.
- If you see "Printer overheating! Please wait" on the screen, please stop printing photos and wait for it cools down.
- Please tear the photo off gently and slowly.

Please keep the marked area in the picture clean, otherwise it will affect the printing effect.

Cleaning method: wipe with a cotton swab dipped in alcohol.

Then use the UP() button to increase and the DOWN() button to reduce. Then choose OK and push the shutter button() to confirm.

Year	Month	Day
H	Min	S
OK	Cancel	

9. Auto-Power off

Push the shutter button() to choose the options: OFF/3mins/5mins/10mins. Use the UP() /DOWN() button to choose and push the shutter button() to confirm your choice.

Notice: If you turn on this feature, the camera will auto-power off when not in use.

10. Format

The camera uses the FAT32 file system. Please use the card enclosed with the product. If you use a card that is not the FAT32 file system, the camera will ask you to format the card after installing the card.

Notice:

- a. The 32GB TF card has already been installed in the camera.
- b. If the TF card you used is not the FAT32 file system, and it still can't work after formatting it on the camera. It could be the card can't be formatted to the FAT32 system on the camera and you need to format it on your computer. Or you could use a different TF card.
- c. Format the card will erase all files in the card, please save the files if it is needed.

Troubleshooting

1. Issues with the Memory card

a. Says No card after installing the card

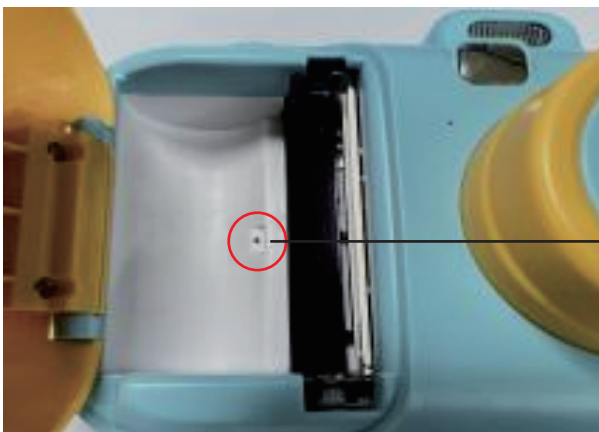

----Check if the card is correctly installed. See the instruction on Page 2

b. Keep asking to format the card

----The file system of the card should be FAT32. If it can't format it to the FAT32 file system, it does not work with the card.

2. The camera froze

----Open the cover of the paper storage bin, and you can find the reset hole inside of it, use a pin to insert the hole and the camera will be turned off. Then you can restart the camera and use it.

Reset Hole

3. Does not work when connecting to PC

----If you see a "Memory" icon on the screen, push the shutter button() to confirm and the camera will enter the file transmission mode.

----After connecting to the PC, if it has no icons on the screen, please check if the cord has been fully inserted into the port or change to a different cord that supports file transmission.

Be Careful
