

QUICK START GUIDE

SOLAR SYSTEM MODEL

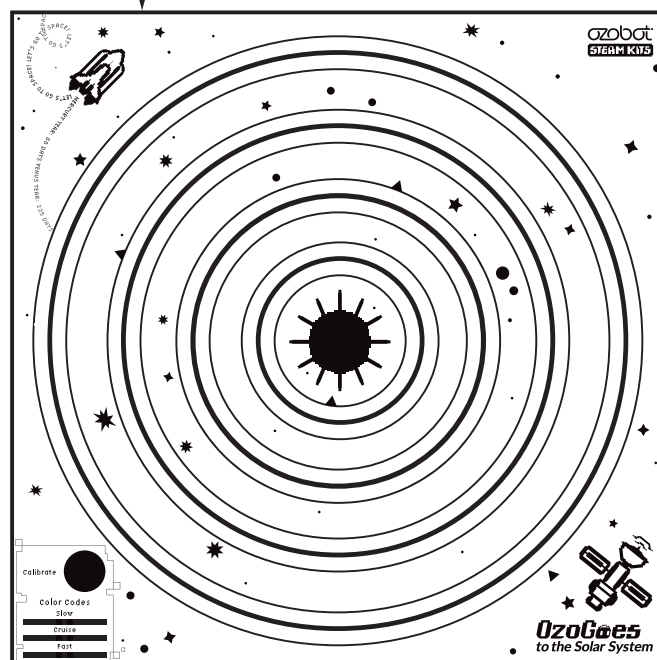

1. Assemble the planets and the Sun.
2. **Solar System Activity**
Choose a *Solar System Activity* card, match it to the corresponding planet, and place the planet in the correct order from the Sun. Note that only the four inner planets fit on the board. The other four sit outside the perimeter of the board.
3. Repeat until all planets are placed.
4. **Model Match-Up**
Use the *Model Match-Up* cards to identify the traits of each planet and the Sun. Read a card and identify the planet or Sun, then place the card near the corresponding planet. Students can use the *Solar System Activity* cards as an aid.
5. **Inner, Rocky Planets**
Make copies of the *Inner, Rocky Planets* student page and provide a timer for each group.
6. The Teacher Guide for the *Inner, Rocky Planets* Activity gives complete instructions. Note that students will need an Evo for this activity.
