

UKULELE HUMIDIFIER PRO

The D'Addario Ukulele Humidifier Pro protects your ukulele in even the driest conditions. Using a specialized hydrophilic sponge that holds 12 times its dry weight in water (much more than an ordinary sponge), the Humidifier Pro allows for longer periods between refills and increases protection in drier environments. Guarding against cracks, warped necks, and shrinkage is now easier and less work for preserving your instruments' ultimate playability.

Suspended by the strings, the humidifier releases moisture evenly and slowly inside your ukulele, yet never touches the instrument's body. The humidifier's stopper allows you to check the sponge status without removal of the unit and provides a tight seal when in place. Maintaining the humidifier is as easy as moistening the sponge when it becomes dry.

INSTRUCTIONS:

1. Remove cap and moisten sponge
2. Squeeze to remove excess water, then insert into holder and re-engage stopper
3. Place in soundhole so that the humidifier is suspended by the two middle strings of the instrument.
