

Operating Instruction Manual

Ken Kou - Shoe Cover Dispenser

Model: SR-M (031)

Product Introduction

The shoes film machine is very practical and has a wide range of application. It is not only suitable for families, but also widely used in hotels, real estate, hospitals, electrical; exhibition halls, dust-free workshops of factories, animal and plant breeding research sites, etc. This product does not require any power supply. Safe and reliable, exquisite shape, no need to take off shoes, easy and convenient to change the film

1. Correct demonstration of film cutting

2. Shoe film Installation steps

Step 1: Lift the cover and put it a side

Step 2: Pick up a roll, align the small

testers on both sides with the card slots on both sides of the machine and put it down (the left and right sides must be placed in the card slot)

Step 3: Put the shoes out and spread them evenly on the rough seabed.

Note: the glued side of the shoes faces up, and the non -finished side sticks to the sponge pad, so that the most precious scroll cover will stick to it cover.

3. Shoe film machine using steps

Step 4: Frist use one foot to step on the paved shoe film with a little force, pull the foot that is stuck to the toe back, and pull it to the black cover of the reartraining (be careful not to cast too long, so as not cut it) set is the best way to stick to the machine and push it down a little bit, and it will be changed and cut off

Precautions of use

In order for you to use this product better, please use it according to the following precautions:

1. When installing the shoe film, put the glued side up, and the non-stick side look at the sponge pad on one side, don't reverse it, so that it can stick to the sole.
2. When sticking the shoe film, pull it back slowly, and the length of the shoe should not exceed pass the black pedal so as not to effect the cutting film.
3. Because the film cutting blade is sharp, don't touch it with your hands, and be careful not to let children hold it.
